

Assembly

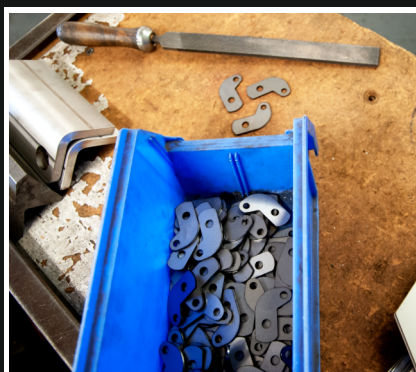

PRODUCT ASSEMBLY SERVICE

THE FINAL BUILD. Bespoke assemblies, labelling and product identification are just some of the services we provide clients at the final assembly stage. Our engineers will finish your project to the agreed standard, with great care and attention, reducing your workload. We pass on our wealth of knowledge to clients for cost and energy saving ideas, whether it is a widget design to increase savings or using our advanced machinery that may not be accessible otherwise or elsewhere.

PACKAGING AND DELIVERY. After the production process, it's time to sign, seal and deliver. As our portfolio showcases, there is no project too big. We understand it's not always possible for our clients to collect. Millions of products have been delivered after being carefully assembled. We can deliver directly to you or your customer's doorstep, with our fleet of vehicles after appropriately packing the order. If we must use our well-trusted couriers, they will ensure your order is taken care of and is an easy and friendly experience.

Organised packing and logistics for collection or delivery

Precision and care throughout each process

On and off site assistance possibilities for large projects

EXPERIENCED ENGINEERS

We have over 30 years of sheet metal engineering experience, so if you have been looking for cost effective solutions without compromising on quality and appearance, you can trust us. Where your products quality and looks are critical, we ease our clients with a piece of mind that you should only expect the best level of service. Our strong quality driven systems and innovative, economical manufacturing ideas, always give us the cut above.

SAFECONTRACTOR™ APPROVED

Being an accredited Safe Contractor™ means our procedures, policies, training and insurances have all been rigorously audited. The annual refreshers keep our business updated, organised and in-line with legal industry requirements. The highly sought accreditation takes risk away from you, and helps us exceed your expectations; this defines us as well-trusted, experienced partners in production.

PRODUCT INSPECTION AND PREPARATION

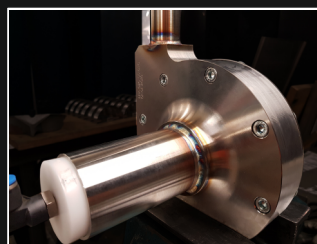

We offer our clients mechanical assembly and product packaging once the final production stage is completed. Our engineers can also offer a complete finishing package tailored to your needs, inclusive of testing, labelling, storage and distribution throughout the UK and Worldwide. Our facilities and set up are best suited to repeat batch production, with an emphasis on consistent results and high quality standards.

Professional finishing and assembly

Complex stainless steel furnace build

Polished and assembled component

DEDICATED SERVICE

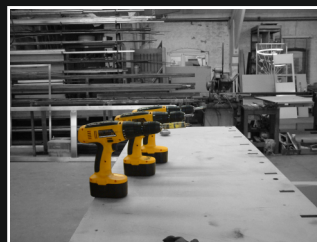

If you haven't already got product drawings, there's no need to spend your time developing them. Our clients get the best potential product and we are proud to be of great assistance no matter the stage of your product.

Large bespoke folded magazine table

Suitable preparation for delivery

Dedicated areas for assembly builds

We use advanced software and the strong knowledge of our team to create the best suited outcomes. We also have incredible insights into how you can claim back money from all expenses made on research and development during all production.

Steel welded and constructed trolley

Suspension swing arm assembly

Qualified and experience machinists

By investing in our designers, we offer any sized businesses and freelancers with access to resources only larger companies can normally afford. We use incredibly powerful programs such as **Radan**, **AutoCAD**, **Peps**, **Solidworks** and **Adobe Suite**.

ETCHING, ENGRAVING & DETAILING

The workshop is directly networked to our design office, giving the Freshlook design team all the flexibility and speed required to produce precise work within a promised lead time. Adding etched detail promotes a professional brand image and boosts quality of a product. Using our industry approved machines, we can work with mostly all types of sheet metal including box section, angle, tube, bar and extrusions.
